Critical Appraisal of Topic (CAT)

Critical Appraisal Worksheet for Systematic Reviews/Meta-Analysis

Are the results valid?

Did the review explicitly address a sensible clinical question?
(e.g., explicit and appropriate eligibility criteria included?)

Was the search for relevant studies detailed and exhaustive?
(e.g., sources and search strategies specified?)

Were the primary studies of high methodological quality?
(e.g., clear methodological selection criteria specified?)

Were selection and assessments of studies reproducible?
(e.g., explicit approach used to select and extract data from all included studies?)

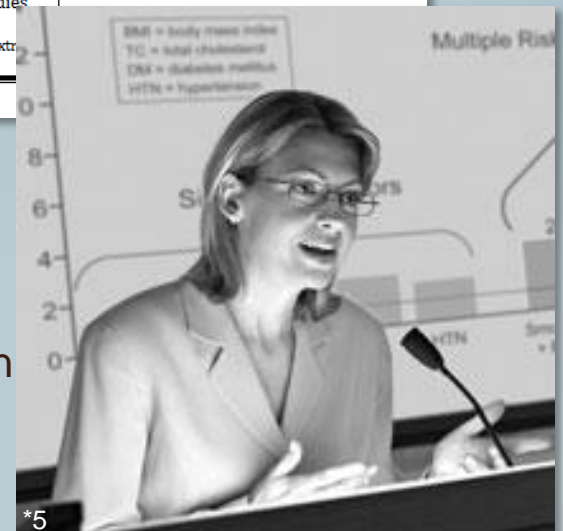

What are the results?

Beilue: Flight of a Dove lands in Rwanda

Retired doctor to teach for 1 year in Africa

Posted: September 4, 2012 - 10:55pm

[Back](#) | [Next](#)

Michael Norris / Amarillo Globe-News - Dr. Dennis Dove, who recently retired from Texas Tech's School of Medicine in Amarillo and Northwest Texas Healthcare System, will venture to Rwanda to teach medical students. The one-year teaching trip is through the Human Resources for Health Initiative of the Clinton Foundation.

By **JON MARK BEILUE**

A "For Sale" sign stands in front of the expansive home of Dr. Dennis Dove in the Greenways neighborhood in southwest Amarillo. The size fits a man of his stature. The house is five bedrooms, five baths, almost 6,000 square feet.

He retired June 30, and he will be making a move. Not to be closer to children, not to the edge of a golf course, not to a retirement villa.

He and wife Claudette are moving to Rwanda. There are no homes listed for \$750,000 in that Third World east African country.

Received 7 April 2009; received in revised form 15 July 2009; accepted 15 July 2009

Abstract

Coronary artery bypass graft (CABG) surgery involves harvesting the great saphenous vein (GSV) using the traditional open technique (TOT). This can be associated with significant leg morbidity and patient dissatisfaction. Alternatively, the standard bridging technique (SBT) is a minimally invasive procedure of vein retrieval that uses smaller incision incisions along the length of the leg and may reduce postoperative complications. This study was designed to compare the success of SBT in reducing leg morbidity and increasing patient satisfaction. One hundred patients were recruited into the study and computer randomised into two groups of 50 undergoing SBT or TOT. Leg morbidity and patient satisfaction were analysed by assessment of pain scores, wound development and scar formation. Closure and harvesting time were also compared between the two groups. SBT was associated with better wound development ($P<0.001$) and a
